Grade 3 Be Water Smart® Program Application Form

This module is designed to create a foundation for Grade 3 students in order to conduct a basic risk assessment in common water environments to avoid preventable drownings in their future. When completed, they should be able to identify risks, recognize and respond to potentially unsafe water-based environments and know what to do if someone is in distress. The delivery guide provides a 60 minute lesson plan and educational aids designed to provide instruction to support Grade 3 teachers in delivering the content in this module. This free program is currently limited to schools in Alberta and the Northwest Territories.

There is a limited number of free printed resources available to schools and they will be distributed on a first come first serve basis.

SCHOOL INFORMATION - Please print clearly
